

Protect Your Family From Adverse Drug Reactions.

**RxWise™ Web Access Version
Directions and Demo Exercises**

Launch RxWise

Launch RxWise Web from www.rxwise.com or your company's intranet.

Based on the speed of your internet connection and your computer, it might take a minute or two for the RxWise screens to initially load. Because the RxWise Web version uses large graphic and data files, we strongly recommend that you access the RxWise Web version through a broadband connection (cable or DSL). Dial-up connections may be too slow for practical use.

Demo Exercises: Set Up A Profile

- 1. Logon**—When you complete the online payment process, you will receive a temporary User Name and PIN by email. On your first logon, you must use the temporary User Name and PIN information:

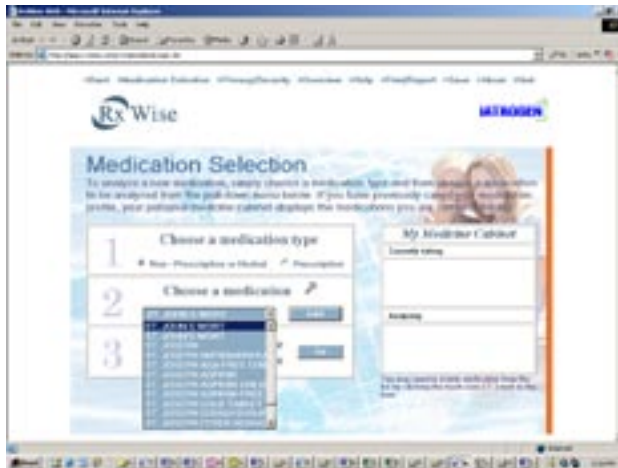

- 2. Your User Profile**—Create your password protected profile. Enter your first and last name, date of birth (format mm/dd/yyyy), specify whether you are male or female and select a personal User Name and PIN (remember these fields are case sensitive). Each time you logon in the future, you must use your personalized User Name and PIN.

3. Analyze a Medication's Risk Potential—Now, let's analyze the potential ADR risk for an example medicine, “St. John’s Wort.”

- a) Because St. John’s Wort is an herbal medicine, click on the Non-Prescription or Herbal button in Step 1. There are two ways to select St. John’s Wort for the ANALYZING window in Step 2. Clicking on the down arrow in the medication selection window opens a “pop-up window.” Type only the first letter of the medicine’s name to bring you closer to the area where the medicine is listed. Then drag the “vertical slider” button down until you to see St. John’s Wort.

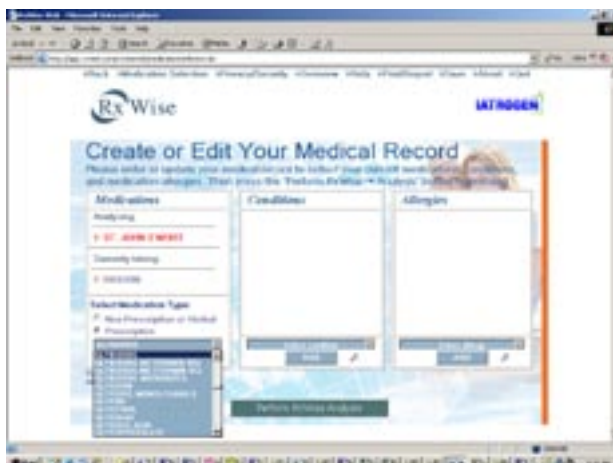

Highlight the medicine by clicking on it, then click the **ADD** button to the right of the “pop-up” window. Alternatively click on the search icon (magnifying glass), type the first few letters of the drug’s name (“St. J” and don’t forget the period after the “t”), find St. John’s Wort, highlight it by clicking on the name in the list, then click the **ADD** button in the search window.

- b) St. John’s Wort now appears in the Analyzing section of MY MEDICINE CABINET.

4. Add More Medications—Now we’ll add an example self-reported medication history.

- a) Click on **GO** (in Step 3) to advance to the CREATE OR EDIT YOUR MEDICAL RECORD screen.
- b) In the MEDICATIONS window, click the **PRESCRIPTION** button. Click on the search icon (the magnifying glass) and type a few letters of the drug name “Digoxin,” highlight “Digoxin” by clicking on the name and click the **ADD** button in the search window.
- c) To add another medicine, “Glyburide,” first erase Digoxin from the search box (click in the box and press the delete button on your computer), then type the first few letters of the medicine “Glyburide,” click search, highlight the drug

name and click **ADD**. Additional medicines can be added to your history by repeating this process. When you finish adding medicines, click the **CLOSE** button in the search window.

5. Enter Medical Conditions—Now let's enter some example medical conditions.

In the CONDITIONS window:

- a) Open the search window (by clicking on the magnifying glass icon), and type a few letters of the condition name “Hypertension,” click search, highlight it and click the **ADD** button in the search window.
- b) To add the next condition, delete Hypertension from the search box (click the condition name in the box and click delete) and type a few letters of the condition name “Congestive Heart Failure,” click search, highlight it and

click **ADD** in the search window. Now you've created a sample disease history. Click **CLOSE** to close the search window.

6. Enter Allergies—In the ALLERGY window, open the search window by clicking on the magnifying glass and type a few letters of the allergy “Acetaminophen Allergy.” Highlight it and click **ADD** in the search window.

7. Perform Analysis—Click on **PERFORM RXWISE ANALYSIS**.

- a) The following may appear:  **Alert Messages**,  **Caution Warnings**, and  **Information Advisories**.
- b) To view allergy messages, click **VIEW ALLERGY ✓ RESULT**.
- c) To view messages for medical practitioners, click **HEALTHCARE PROVIDER EXPLANATION**. To go back to the consumer messages, click **VIEW DUR** results
- d) The PRINT/REPORT function prints the report currently on the screen (consumer, healthcare provider or allergy). Be sure you have the correct type of report

showing before selecting print. You can email your report to your healthcare provider by entering their email address in the window provided and clicking “**SEND**.”

8. Update Medical Record—Your medical record will change over time. Let’s update this example history to add “Diabetes.” Click **START NEW ANALYSIS**, then click **GO**. This will take you to the CREATE OR EDIT YOUR MEDICAL RECORD Screen. Open the search window (clicking on the magnifying glass), type a few letters of the disease name “Diabetes,” highlight it and click **ADD**. Your example medical history has now been updated.

9. Perform New Analysis—Now let’s check for risks for a prescription medicine, “Lasix,” against the updated medical history. Click **MEDICATION SELECTION** on the top menu bar.

- Notice that “St. John’s Wort” is no longer in the ANALYZING window when you start a new analysis.
- On the MEDICATION SELECTION window, click on the **PRESCRIPTION** button. Type a few letters of the drug “Lasix,” highlight it and click **ADD**.
- Click on **GO** to move to the CREATE OR EDIT YOUR MEDICAL RECORD screen. Click **PERFORM RXWISE ANALYSIS**.
- All alerts, including any for Lasix, will appear on the RESULT screen.

10. Remove Information—You must remove all of the example data that we have used in this training exercise and replace it with your own medical conditions and medication usage. To remove medications or medical information from your profile, simply click on the red trash can icon next to each of the items you wish to delete on the CREATE OR EDIT YOUR MEDICAL RECORD page. After you’ve removed the example data, enter your own medical and medication history using the same procedures you just learned. The ANALYZING window should only contain NEW medicines you wish to analyze. Medicines you are currently taking should be listed in the CURRENTLY TAKING window. If you decide to start using a medicine you have analyzed, it must be entered into the CURRENTLY TAKING window, as it will automatically be removed from the ANALYZING window when you start a new analysis.

11. End The Session—To end the session, click **QUIT** at the top of the screen. Select **YES** to update your information.

Enjoy using RxWise. We hope it provides you with confidence that you are helping reduce your risk of serious adverse drug reactions.

YOU MUST CONSULT WITH YOUR PHYSICIAN OR PHARMACIST BEFORE MAKING ANY CHANGE TO YOUR MEDICATION THERAPY. NOT ALL MEDICATION RISKS ARE KNOWN OR REPORTED IN THE LITERATURE, AND NEW MEDICATION RISKS ARE CONTINUALLY BEING REPORTED. THIS INFORMATION IS PROVIDED ONLY FOR YOUR EDUCATION AND FOR YOU TO DISCUSS WITH YOUR PERSONAL PROVIDER.
